1 AIMS OF THIS DOCUMENT AND SCOPE

This document governs the process through which reports sent or transmitted by anybody (stakeholders, employees or former employees, other third parties), including those made anonymously, are received, analysed and processed by Engineering Albania Shpk (“**Engineering Albania**”).

This document is approved by the Board of Directors of Eng Albania as of [.....].

The Responsible Unit of Eng Albania performs the management of reports and processing of data in cooperation with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A. in accordance with the applicable provisions of Albanian law, as well as in the interests of Eng Albania and for the protection of its principles of ethics, fairness and corporate integrity. The operational and management autonomy of Eng Albania is respected in all cases, and the confidentiality requirements underlying the performance of the verification activities are always guaranteed.

In case of a discrepancy between this Regulation and the Procedure of Engineering Group on Management of reports, even anonymous ones (Whistleblowing), this Regulation shall prevail.

2 INTRODUCTION

The Engineering Group (the “Group”) is committed to operating in accordance with ethical and governance principles which meet the highest international standards.

The group requires that all activities carried out, without exception, demonstrate ethical and professional integrity, proper conduct and absolute respect for the laws and regulations of all the countries in which it operates, as well as for the principles of honesty, reliability, impartiality, loyalty, transparency, propriety and good faith.

In line with international best practices and with full respect for the applicable regulations, Engineering Group follows a process for the integrated receipt and management of reports. The main goals are:

- to guarantee the standardisation of the operating methods used, in both the management and investigation stages, as well as prompt and effective analyses;
- to create common reporting channels — without prejudice to the autonomy of the other entities in relation to whistleblowing — with a single body to guarantee oversight of the channel and the integrated management of reports in terms of all relevant aspects of the Internal Control System, whether operational or compliance-related;
- to make shared mechanisms available which can intercept and manage any conflicts of interest within the report management process;
- to vest the Group’s Chief Audit Executive with the role of Co-Ordinator of the Whistleblowing Process, in order to guarantee, with the support of the Internal Audit division: i) that the process shall be constantly updated, including with reference to the applicable regulations; ii) that technical secretariat activities and all operational activities shall be carried out, from receipt of the report to conducting investigations and managing the flow of information towards the Corporate and Control Bodies.

In addition to the reference legislation, the provisions of this procedure comply with the requirements of the Engineering Group’s Code of Ethics; the Organisation, Management and Control Model pursuant to Italian Legislative Decree no. 231 of 2001; and the Anti-Corruption Policy.

3 DEFINITIONS

CODE OF ETHICS: the Group's Code of Ethics, which identifies the essential core values which make up the company culture and which are expressed through the principles and management policies that guide everyday operations. It is adopted by all Group companies.

THE ENGINEERING GROUP (or just ENGINEERING): the parent company, Engineering Ingegneria Informatica S.p.A., and its subsidiary companies, whether controlled directly or indirectly, including Engineering Albania SHPK.

REPORTING COMMITTEE: the joint body responsible for the report management process. This involves assessing the adequacy of the process, suggesting any steps to improve the process to the Board of Directors, and facilitating the activities necessary for informing and training the people within the company. It consists of the managers of the following Group departments: General Counsel, Human Resources & Organization, Internal Audit. The Reporting Committee carries out the activities set out within this procedure on behalf of Engineering Ingegneria Informatica S.p.A., and of all the companies to which the procedure is applicable (ref. par. 1). While respecting the confidentiality and "need to know" principles, internal divisions impacted by any matters reported may also be involved, in order to guarantee an integrated and comprehensive analysis (e.g. if a report received may have a significant effect on the financial statements, the Chief Financial Officer may be included).

CO-ORDINATOR OF THE REPORTING COMMITTEE: this role is filled by the Group's Chief Audit Executive, who guarantees the end-to-end management of the report management process, from receipt of the reports to the end of the investigation. If necessary, this individual represents the Committee in meetings with the Administration, Management and Control Bodies.

INTERNAL AUDIT: The Engineering Group's Internal Audit division.

ALBANIAN WHISTLEBLOWING LAW: Law no. 60/2016 "On whistleblowing and the Protection of Whistleblowers" ("Albanian Official Gazette" No. 115/2016)

RESPONSIBLE UNIT: is the special body, designated within the company Engineering Albania, composed of [indicate the number; it can be one or more] employee[s] of the company Engineering Albania and charged with report management process in Albania.

ANTI-CORRUPTION POLICY: the Anti-Corruption Policy of the Engineering Group.

REGISTER OF AUTHORISED PERSONS: the register kept by the Responsible unit, containing a list of the persons authorised — on a case-by-case and need-to-know basis — to know of the existence and/or contents of a report and the identity of the Report Subjects and of the Whistleblowers, where legally permitted.

WHISTLEBLOWER: or "reporting person" is an individual who applies for or is in an employment relationship, or has previously worked for the Company, regardless of the nature of the employment relationship or its duration, and whether paid or not, who reports a suspected act or practice of corruption.

FACILITATOR: a natural person who assists the whistleblower with the reporting process, operating within the same work context.

REPORT SUBJECT: any party to whom the facts described in a report are attributed or attributable.

HIDAACI: the Albanian High Inspectorate for Declaration and Audit of Assets and Conflict of Interests.

REPORT: a communication concerning facts which it is thought may represent: illicit conduct or impropriety; breaches of rules; actions liable to jeopardise the company's assets or corporate image; breaches of the Code of Ethics; breaches of the Anti-Corruption Policy; or breaches of company procedures and provisions. Also, it includes the reporting of information by the whistleblower to the Responsible unit of the company Engineering Albania SHPK or the HIDAACI on suspected acts or practices of corruption, committed at his/her place of work in the company Engineering Albania. For the purposes of this procedure,

communications other than those regarding the above cases are not considered to be reports; in particular, those which concern requests, disputes or complaints regarding activities of a commercial nature. Such communications shall be forwarded to the company departments with the competence to receive and handle them, based also on the reference legislation.

THIRD PARTIES: people involved in a variety of roles (e.g. relatives, colleagues, partners, suppliers, consultants, agents, retired employees, etc.) and/or people mentioned in a report (e.g. witnesses, accomplices, or simply people aware of the facts) who do not fall under the definition of whistleblower, report subject or facilitator.

RETALIATION: means any direct or indirect act or omission which occurs in a work-related context, is prompted by internal or external reporting or by public disclosure, and which causes or may cause unjustified detriment to the reporting person.

4 THE PROCESS: STAGES, ROLES AND RESPONSIBILITIES

The report management process consists of the following stages:

- receipt of the report;
- preliminary analysis;
- investigation;
closure.

4.1 RECEIPT OF THE REPORT

In order to guarantee the effectiveness of the whistleblowing process, and to ensure wide, indiscriminate access to all who may wish to make a report, Engineering provides multiple channels through which to do so. Specifically, these are:

- the computer platform accessible to all Whistleblowers (employees, collaborators in various capacities, third parties, etc.) at the website <https://eng.integrityline.com>, which also provides for the possibility of submitting a verbal report (for the sake of clarity, the reports concerning Engineering Albania are forwarded automatically to the responsible unit);
- via email, to the following address: segnalazioni@eng.it (for the sake of clarity, the reports concerning Engineering Albania are forwarded automatically to the responsible unit);
- via ordinary mail¹, by writing to Engineering Ingegneria Informatica S.p.A., Engineering Reporting Committee, to the attention of the Internal Audit Department, Piazzale dell'Agricoltura, 24- 00144 Rome, Italy and/or Engineering Albania, to the attention of the Responsible unit for Whistleblowing at Rruga e "Kavajes", Millennium Business Center, kati i 7, Tirana, Albania;
- verbal submission of information to the Responsible Unit or a member thereof.

Where possible, use of the first channel (the electronic platform) is preferable. In any case, any report shall be forwarded without delay to the Responsible Unit and to the related channels to which the Responsible Unit has access.

Anybody who receives a report through channels other than those provided for above must immediately send the original report along with any attachments through the proper channels to the Responsible Unit, without compromising the effectiveness of subsequent investigation activities and in accordance with the criteria of maximum confidentiality, through means which can protect the whistleblower as well as the identity and reputation of the report subjects and all persons involved and/or mentioned in the report. Any communication received in error must be deleted or destroyed immediately after being sent through the proper channels.

Although anonymous reports are accepted, Engineering encourages whistleblowers to include their names, partly to ensure a more effective process and to allow for quicker and more effective investigations. To that end, it guarantees maximum confidentiality and anonymity. Guarantees and protections in place for Whistleblowers are set out in par. 5 below, to which reference should be made.

Moreover, reports can be sent to the Responsible unit, but regardless of the existence of the Responsible unit the whistleblower may initiate an external whistleblower procedure with the HIDAACI.

4.1.1 REPORT CONTENTS

¹ In order to protect confidentiality and the identity of the whistleblower, where possible the report should be contained within two sealed envelopes: the first with the whistleblower's identifying details; the second with the report itself. Both should then be placed in a third sealed envelope, addressed to the Responsible unit and bearing the word "confidential" on the outside.

Whistleblowers² should include whatever information they possess in their reports.

The subsequent stages of preliminary verification and investigation are made easier if the contents of the report are precise and detailed, e.g.:

- a description of the facts being reported, indicating the known circumstances (means, time and place);
- identifying details of the Report Subject(s), to the extent they are known;
- indication of any other parties who may be able to provide information on the facts being reported;
- indication of any documents supporting the report, or provision thereof where they are in the Whistleblower's possession;
- information about the Employer.
- whether the whistleblower wishes their identity to remain confidential;

in the case of reports not made anonymously, the Whistleblower's identifying details (e.g. general information and contact details).

Verbal submission of information is recorded in a transcript, which includes:

- data about the Employer and the recorder;
- time and place of recording;
- present persons' details;
- a factual description of the information related to the violation, including time, place, and method of violation and other significant factors;
- any remarks by the whistleblower on the content of the transcript or their statement of full agreement with it;
- the authorized person's signature;

The Responsible unit:

- shall promptly send the whistleblower confirmation of its receipt of the report, in all cases within a term of no more than seven days from the date of receipt;
- shall guarantee, where possible and appropriate, constant dialogue with the Whistleblower, in any case the investigation procedure of the whistleblowing shall terminate no later than 60 (sixty) days from the date of start of investigation, except when the circumstances require a longer period;
- cooperate with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A for purposes of the investigation procedure, in all cases acting in compliance with the requirements of the Albanian law.

4.2 PRELIMINARY VERIFICATION OF REPORTS

The Responsible unit analyses the reports received and:

- if the contents of the report are precise, thorough and verifiable, and if the report has been made with a sufficient level of detail to enable accurate verification of whether or not the facts or circumstances reported are well founded, based on the tools for investigation available to it, the department shall open an investigation; otherwise, in the event of an insufficiently detailed communication, and if the Whistleblower cannot be contacted to provide the necessary additional information, the department shall keep the report on file;

² These may be supported by a facilitator, a natural person who assists the whistleblower with the reporting process, operating within the same work context, and whose assistance must remain confidential.

- if the report concerns facts which, although they have to do with Engineering Group, do not fall within this document's scope (examples of such "non-applicable reports" include, but are not limited to, disputes of a commercial nature, commercial offers, marketing activities, etc.), the department shall forward it to the Engineering department with the competence to handle the matter.

The Responsible unit shall promptly notify the HIDAACI of the steps it has taken in reference to the above points, giving reasons for its decisions, in case it shall be considered appropriate that such notification is needed.

Moreover, the Responsible unit guarantees the necessary flows of communication within the organisation and/or towards the Administration and Control Bodies, as well as informing the Board of Directors of Engineering Albania and the Group where competent. or the sole shareholder of the company The Responsible Unit may request cooperation with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A during the analysis of reports and to support with the flows of communication within the organisation and/or towards the Administration and Control Bodies. In any case the Responsible unit guarantees the confidentiality and the protection of personal data of the Whistleblower/reporting person.

Finally, the Responsible unit, has the power to:

- file reports concerning facts which were already known and fully investigated, in the event that the new report has not added or enabled the addition of further elements or aspects to the information already known;
- abstain from handling reports regarding:
 - facts which the Public Authorities (e.g. judicial authorities, and administrative bodies, including independent authorities vested with supervisory and control powers) are known to be investigating;
 - facts which are already known and which are the subject of litigation or pre-litigation between the company and Third Parties or Employees.

4.3 INVESTIGATION OF REPORTS

The purpose of investigation is to check the facts reported in more detail in order to verify whether or not they are objectively founded. These investigations are conducted by the Responsible unit, potentially with the support of external consultants, depending on the contents of the report and the type of analysis required. Moreover, any internal divisions affected may also be involved to carry out any specialist verifications (e.g. the Security department), or to guarantee the necessary flows of communication are conducted in a timely manner if the reports concern imminent events. All Engineering personnel, however they may be involved in the management of reports, are obliged to ensure that all appropriate verifications are carried out on verifiable reported facts, and that such verifications are carried out in the shortest time possible and in accordance with the principles of objectivity, competence and professional diligence. Suitable means shall be guaranteed to ensure that report management activities are carried out with transparency and propriety.

During the administrative investigation period, the Responsible Unit, in cooperation with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A, examines and evaluates the allegations raised by the whistleblower regarding the suspected act or practice of corruption. For this purpose, the Responsible Unit has the right to request information and documents, order inspections or analyses, collect statements or question people who are aware of the circumstances of the case or consult with experts in various fields.

In the course of the internal whistleblowing procedure, the Responsible unit may take statements from others to verify the information, documenting them in a transcript containing the following details:

- data about the Company and the recorder;
- time and place of recording;
- present persons' details;
- description of findings from the internal whistleblowing information;

- any remarks by present persons on the content of the transcript or their statement of full agreement;
- signatures of present persons and the authorized person.

The whistleblower and any other third party who is suspected of possessing documents or having knowledge of the circumstances reported, including the person concerned, participate in the administrative investigation, if deemed necessary by the head of the investigation.

Each party participating in the administrative investigation is guaranteed a due process, in accordance with the provisions of the Albanian Code of Administrative Procedures, as well as:

- a) may give written statements, arguments or opinions;
- b) may consult the investigation file;
- c) has the right to be heard regarding his claims.

The Responsible unit shall notify the reporting person of any measure taken in response to the whistleblower report no later than 30 days from the moment of the action. Notwithstanding the notification deadline provided for in this article, the Responsible unit shall be obliged to respond within 30 days of receiving a request for information, submitted in writing by the whistleblower, at any time, regarding the matter reported by him.

The Company, in cooperation with HIDAACI, shall take immediate measures and, to the extent possible, to prevent or hinder the continuation of the harmful consequences of the suspected act or practice of corruption reported.

Upon concluding the procedure, the responsible unit compiles a report on actions taken and proposes measures to rectify irregularities and adverse actions identified in the procedure.

The Responsible Unit should regularly coordinate with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A before taking any action and proposing measures regarding the irregularities. In any case the Responsible unit guarantees the confidentiality and the protection of personal data of the Whistleblower/reporting person.

4.4 CLOSURE OF REPORTS

The Responsible unit, in cooperation with the bodies responsible for Whistleblowing in the parent company Engineering Ingegneria Informatica S.p.A., depending on the nature of the report and whenever possible under the applicable law, shall examine the results of the investigation stage and:

- proceed to close the report, classifying it as "Founded" or "Unfounded" and "Action taken" or "No action taken";
- if the contents of the report have been confirmed, refer the decision regarding any necessary steps to the departments with competence over the matter and in accordance with the existing delegation system;
- if areas of weakness and/or potential points for the improvement of the internal control system and of risk management have come to light in the course of the investigation (regardless of the result thereof), request that the necessary steps for improvement be taken. To this end, the Responsible unit in cooperation with the Internal Audit department supports the competent Management in drawing up action plans and monitors the implementation thereof in the agreed-upon time frame (as part of the follow-up process);
- proceeds to activate periodic flows of communication between the Administration and Control Bodies and the other parties within the Internal Control System, particularly the Supervisory Board, and in the event that urgent critical issues emerge, in order to guarantee the necessary swiftness.

The report for the administrative investigation shall contain:

- time, place, and method of receiving information;
- actions taken to verify the information;
- persons informed, including dates and methods;
- factual findings, identified irregularities, harmful actions, their description, and consequences.

Whistleblowers can always withdraw their reports by sending a message to this effect through the preferred channel (the computer platform), or through the channel they originally chose for the submission of the report. In this specific case, any investigations which have already begun as a result of the report may be interrupted and the Responsible unit shall proceed to close the report, unless it involves matters on which action is mandatory.

The whistleblower has the right to express their opinion on the report on actions taken in the internal whistleblowing procedure within 15 days.

4.5 DOCUMENT STORAGE

The Responsible unit is responsible for storing with the maximum care the documentation which has been produced and managed (whether paper or electronic, and including the file dedicated to individual reports and containing the documentation regarding the preliminary verification activities, the investigation and its results).

Documentation must be stored for the length of time necessary³ to achieve the purposes pursued and following appropriate levels of security in relation to the risk of the accidental or illegal destruction, loss, alteration, or disclosure of the information or access thereto by unauthorised parties.

4.6 MANAGEMENT OF SPECIAL CASES AND POTENTIAL CONFLICTS OF INTEREST

In the event that the reported facts concern:

- one or more members of the Responsible unit, directly or indirectly, or activities which fall within the organisational responsibilities assigned to them, those members shall be excluded from the management of the report;
- one or more members of the Board of Directors of Engineering Albania SHPK, sole shareholder shall also be involved in the management of the report.

In cases of other, different situations in which a member of the Responsible unit finds themselves faced with a conflict of interests, it is their responsibility to declare this conflict. The other members shall assess whether or not it is appropriate to exclude the member in question from taking part in meetings concerning the specific subject of the conflict.

4.7 COMMUNICATION, TRAINING AND INFORMATION

Through the competent divisions, the Reporting Committee and the Responsible unit is responsible for facilitating the activities necessary over time for informing and training the people within the company regarding the management of reports and, in particular, regarding the use of the process, the supporting tools and the guarantees and protections in place for Whistleblowers and Report Subjects.

This document is published on Engineering Albania intranet and internet websites, where such are present. translated into Albanian language, so that the document can be spread and understood more easily.

The human resources departments of Engineering Albania shall ensure, to the extent of their competence, that this document is delivered to employees upon their hiring (preferably through digital means) to attest that they have seen it.

5 GUARANTEES AND PROTECTION

5.1 GUARANTEE OF CONFIDENTIALITY

³ In accordance with the Law "On protection of personal data".

All Engineering personnel, however they may be involved in the management of reports, are obliged to guarantee confidentiality regarding the existence and contents of reports, as well as the identity of Whistleblowers (where revealed), report subjects and people involved or mentioned in the report.

All communications regarding the existence and contents of reports, as well as the identity of Whistleblowers (where revealed) and report subjects, must comply strictly with the need-to-know criterion.

In this regard, such information may be communicated: i) in cases where it must be known in order to understand the facts reported and/or to effectively carry out the relevant investigation and/or management activities; ii) to the Control and Supervisory Bodies, for reports which fall within their respective areas of competence.

To this end, the Responsible Unit shall make a list within the special Register of Authorised Persons of the people with whom it was necessary to communicate regarding each report and the information thus communicated (e.g. the existence and/or contents of the report, the result of the investigations carried out).

5.2 PROTECTION OF THE WHISTLEBLOWER

5.2.1 PROTECTION OF THE CONFIDENTIALITY AND IDENTITY OF THE WHISTLEBLOWER

Engineering guarantees that the identity of the Whistleblower shall be kept confidential from the receipt of the report, in accordance with legal provisions and with what are generally recognised as the best practices of reference in the area.

In the case of reports sent through the computer platform as described in § 4.1 above, the identity of the Whistleblower (and the contents of the report) is protected and kept confidential through the following measures:

- the platform is provided by an independent, specialist third party outside of the Engineering Group, chosen for its requirements and guarantees in relation to security and confidentiality and with which certain obligations pursuant to the applicable legislation have been established;
- the platform adopts a “no-log” policy, which is to say it does not record information on the means of connection (e.g. server, IP address, mac address) in any way, directly or indirectly, simply identifying the login/logout of a generic “whistleblower”. This guarantees that access is completely anonymous. In particular, it means that the company’s IT systems are unable to identify the point from which the portal is accessed (the IP address), even if it is accessed from a computer connected to the company’s network;
- the platform guarantees high security standards, using advanced encryption algorithms and other methods to protect against unauthorised access;
- no registration is required to access the Engineering website through the Internet (available to all, including employees), so Whistleblowers can remain anonymous. Otherwise, if Whistleblowers so wish, they can provide their name so that their general details can be sent to the Reporting Committee or Responsible unit.

In the case of reports sent through the ordinary mail and email channels, the identity of the Whistleblower (and the contents of the report) is protected and kept confidential through the following measures:

- paper mail addressed to the Responsible unit is delivered sealed (as received from the postal service), to the Responsible unit;
- the email inbox can only be accessed by the members of the Responsible unit; the administrator responsible for the corporate email system may access the inbox in question only when necessary for technical matters.

The person authorized to receive information is obliged to protect the whistleblower's personal data or data that could reveal the whistleblower's identity, unless the whistleblower agrees and gives his consent to the disclosure of such data, following the law governing personal data protection. Anyone who becomes aware of such data is required to protect it. The data must not be disclosed to the person indicated in the information unless otherwise stipulated by specific law

The Responsible unit must inform the whistleblower that their identity may be disclosed to the competent authority if it is impossible for the authority to act without revealing the whistleblower's identity and inform them of protective measures for participants in criminal proceedings.

If revealing the whistleblower's identity is necessary during the process, the Responsible unit is required to inform the whistleblower before the disclosure. The Responsible unit, in communications with the company where the whistleblower works or with any other entity or authority, private or public, respects the obligation of confidentiality and communicates the necessary information only to persons designated for the administrative investigation or for taking measures to follow up on the reported facts, within the framework of a confidentiality agreement between the parties.

5.2.2 PROTECTING WHISTLEBLOWERS FROM RETALIATION AND DISCRIMINATION

In accordance with the law and with what are generally recognised as the best practices of reference in the area, Engineering prohibits and penalises any form of retaliation or discrimination against anyone who has submitted a report (as well as anyone who has cooperated in ascertaining the facts reported), regardless of whether or not the report turns out to be substantiated.

In particular, if a good-faith Whistleblower is an employee, the Responsible unit shall put the necessary checks and safeguards in place (through the competent departments) to ensure that no discriminatory action or other forms of retaliation are taken against the employee as a result of the report, for a period of at least 2 years from the date of the report.

Based on the legislation in force, protective measures apply to all those connected with the Whistleblower, both in the work context and in their family and private life, as well as to all "entities" (companies, associations, etc.) belonging to the Whistleblower.

Any act of retaliation against the whistleblower is invalid.

5.3 PROTECTION OF THE REPORT SUBJECT

Engineering requires all parties to cooperate in order to preserve an atmosphere of mutual respect within the company, and prohibits conduct which may harm anybody's dignity, honour and reputation. The guarantees of confidentiality established by the Procedure also provide protection to Report Subjects.

Report Subjects shall not face disciplinary sanctions without objective evidence regarding reported breaches, i.e. without an investigation having been carried out on the facts reported and the subject having been made aware of the allegations against them pursuant to legal and/or contractual procedures.

Report Subjects may not ask to know the names of Whistleblowers, except in the cases expressly provided for by law.

As further protection of Report Subjects, the actions and powers permitted to them under the law are not affected.

6 DISCIPLINARY SYSTEM

Where the relevant conditions are met, Engineering provides for and imposes certain disciplinary sanctions upon its employees, specifically:

- those responsible for any acts of discrimination or retaliation, or other forms of illegitimate prejudice, direct or indirect, against Whistleblowers (or against anybody who helps them in ascertaining the facts contained in a report), for reasons directly or indirectly related to the report;
- Report Subjects, based on facts they have been found responsible for;
- all those who violate the confidentiality obligations set out in the Procedure;

- employees who make unfounded reports, whether wilfully or through negligence, as described by the law, or who publicly disseminate a report in the absence of legislative requirements.

The disciplinary sanctions shall be proportionate to the extent and severity of the illicit conduct found. In the most serious cases, they may culminate in the termination of the working relationship.

In relation to Third Parties (e.g. partners, suppliers, consultants, agents), the measures and actions provided for by the law as well as the contractual clauses requiring respect for the Code of Ethics apply, always within the context of what are generally recognised as the best practices in the area.

7 PERSONAL DATA PROTECTION

Out of respect for the principle of data minimisation, only those personal data which are pertinent and necessary for the purposes of the Procedure may undergo processing.

Therefore, all personal data (belonging to any natural person) contained in the report or otherwise gathered during the investigation stage which are found to be unnecessary shall be deleted or rendered anonymous.

The privacy disclosure, published in the dedicated section on the internet site, contains general information regarding personal data processing in the context of the Procedure.

When an individual report is made, the Report Subject and other parties may not immediately receive a specific privacy notification regarding the processing of their data, if there is a risk that providing such a notification would compromise the effective verification of whether or not the report is founded, or the gathering of the necessary evidence. In any case, Engineering publishes information on the management of personal data in the present context on its internet site.

8 RECORDS OF THE RESPONSIBLE UNIT

The Responsible unit shall provide Management and the Control Bodies with records on a regular basis, at least every six months. In any case the Responsible unit guarantees the confidentiality, and the protection of personal data of the Whistleblower/reporting person and information related with the whistleblowing. Specifically:

- statistical records on the overall numbers of reports received;
- detailed records on the reports considered most significant.

9 OTHER OBLIGATIONS OF THE RESPONSIBLE UNIT

The Responsible Unit shall be entitled to all rights assigned to it under the Albanian Whistleblowing Law and shall perform all obligation set forth in the law, including the periodic reporting to HIDAACI.
