

Connecting to Engineering office internet

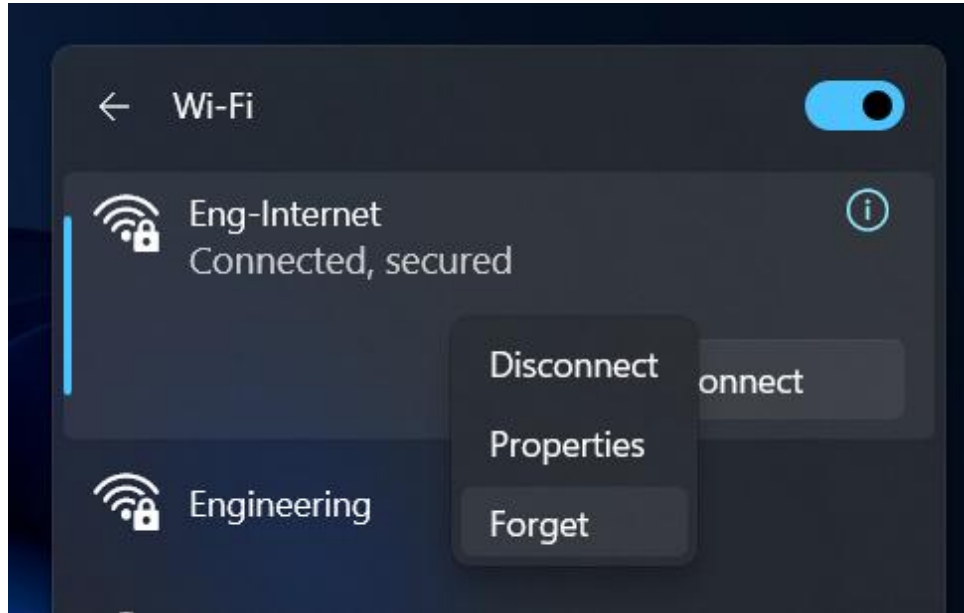

IMPORTANT NOTE: Only Wi-Fi is available throughout the office

This procedure also applies to mobile devices

1. Go to the Wi-Fi icon in the bottom right corner of the screen and select Eng-Internet

2. Right click on Eng-Internet and select the FORGET option (this mainly applies to colleagues who worked from the old office whose laptops still store their old password so this step is necessary)

3. After forgetting or connecting to the network for the first time, type in your **username** and **password** (the same ones you use to login into RAS)

Please make sure it is the correct username and password otherwise it will say “Unable to connect to this network”

IMPORTANT NOTE: After changing your password per company policy when required, you have to do step 2. in order to type in your new password and connect again to the network
